Micro Focus ZENworks Suite gives you more value at a better price with a bundle of the following unified, best-of-breed IT management solutions:

- [ZENworks Configuration Management](#)
- [ZENworks Asset Management](#)
- [ZENworks Patch Management](#)
- [ZENworks Endpoint Security Management](#)
- [ZENworks Full Disk Encryption](#)
- [Micro Focus Desktop Containers](#)
- [ZENworks Service Desk](#)

You need IT solutions that help you reduce the costs and overhead of managing your environment, while delivering better outcomes. That's best achieved with solutions that empower you to employ consistent processes and procedures, while unifying management through a single console. Much like Unified Endpoint Management (UEM) seeks to bring together multiple endpoint management tools under a unified management paradigm, Micro Focus ZENworks Suite unifies multiple IT management capabilities so you can manage multiple aspects of your IT environment in a simplified, consistent manner. It integrates UEM, asset management, patch management, endpoint security, and full disk encryption under a single enterprise console. Plus, it includes solutions for IT service management and application containerization. And it provides all these solutions at a lower cost than purchasing them separately.

ZENworks Configuration Management

ZENworks Configuration Management gives you an UEM solution that simplifies and enhances management of all the devices and software in your environment. It automates IT management processes across the lifecycles of desktops, laptops, and mobile devices to help you dramatically reduce your total cost of ownership, while ensuring all configurations comply with corporate policies. It enables employees to be more productive by giving them the tools they need, regardless of what devices they use or where they choose to work. It also reduces IT workload through automatic policy enforcement and dynamic resource

management, maintenance, and deployment based on user identity.

ZENworks Asset Management

ZENworks Asset Management combines hardware, software, and purchasing data to provide a complete view of all your IT assets. It integrates inventory, software usage, and sophisticated license reconciliation to help you get an accurate picture of your software installations and license compliance. Its comprehensive array of capabilities works together to enable you to make more informed asset purchasing decisions, reduce compliance risks, and eliminate overspending. Additionally, ZENworks Asset Management gives you powerful tools for managing a wide range of IT contracts.

ZENworks Patch Management

ZENworks Patch Management helps you defend your network against the high costs of viruses, while lowering patch management costs and labor. You can proactively manage threats by automating the collection, analysis, and policy-based delivery of patches to a diverse range of endpoints. Its unique combination of integrated patch monitoring, assessment, deployment, and reporting features enable you to patch systems up to 13 times faster than the industry average. Its powerful monitoring and reporting engine provide you the deep insights you need into your overall patch status and network security posture.

Note: Windows patch subscription requires an additional fee.

ZENworks Endpoint Security Management

ZENworks Endpoint Security Management enables you to protect the data on your Windows desktops and laptops, while monitoring and maintaining the health of those devices from a central console. You can implement and enforce tightly controlled, highly adaptive security policies without placing any configuration or enforcement burden on your end users. It gives you control over how your Windows endpoints communicate and access information, including the ability to automatically change security configurations based on users' roles and locations.

ZENworks Full Disk Encryption

To help you comply with industry data protection guidelines and government regulations, ZENworks Full Disk Encryption enables you to centrally enforce policies for encrypting entire hard disks on your organization's Windows 7, Windows 8, and Windows 10 systems. It makes it easy to centrally manage all the encrypted Windows devices across your enterprise. It supports the Federal Information Processing Standards (FIPS) 140-2 Level 2 and Level 1 encryption modules.

Micro Focus Desktop Containers

Desktop Containers helps you overcome the challenges associated with application

conflicts, the ever-changing desktop and browser landscape, and the demand for dynamic access to applications. It lets you create self-contained virtual environments for your applications that you can package once and run on any Windows XP or higher device. The packaged container incorporates all the preconfigured files, registry data, settings, and other components you need to immediately run your applications.

ZENworks Service Desk

ZENworks Service Desk Standard Edition gives you a complete, scalable service desk solution that lowers your service and support costs. It improves your service levels by streamlining and automating your entire service management environment. With four PinkVERIFY certified IT Infrastructure Library (ITIL) processes, it helps you employ industry-acknowledged best practices. Plus, its automated workflows integrate with ZENworks Configuration Management to allow approved user-requested apps to be automatically deployed on Windows, iOS, and Android devices without IT intervention.

Note: You have the option to upgrade to ZENworks Service Desk for ITIL to take advantage of its 10 PinkVERIFY certified IT Infrastructure Library (ITIL) processes.
