

Fortify: End-to-end AppSec

Build software resilience for modern development from an AppSec partner you can trust. Fortify delivers a holistic, inclusive, and extensible platform that supports the breadth of your software portfolio.

Fortify SAST: [Static Code Analyzer \(SCA\)](#) is an automated static application security testing (SAST) offering that builds security into the development process. Fortify SCA pinpoints the root cause of the vulnerability, prioritizes results, and provides best practices so developers can code more securely.

Fortify DAST: [Webinspect](#) is an automated dynamic application security testing (DAST) solution that identifies and validates high-risk security vulnerabilities in running applications.

Fortify Software Security Center (SSC) is a centralized management repository that provides security managers and program administrators with visibility into integrations and the entire application security testing program.

Fortify on Demand (FoD) is a complete Application Security as a Service solution. It offers an easy way to get started with the flexibility to scale. In addition to static and dynamic, Fortify on Demand covers in-depth mobile app security testing, open-source analysis, and vendor application security management. False positives are removed for every test and test results can be manually reviewed by application security experts.

Fortify Software Composition Analysis: [Fortify SCA](#), powered by Sonatype, goes beyond a single comparison of declared dependencies against the National Vulnerability Database by using natural language processing to dynamically monitor every commit and vulnerability site.

Flexible & Scalable

SaaS, On Premise, and AppSec-as-a-service

- Fortify on Demand (FoD)** – AppSec-as-a-service
- Fortify Hosted** – Software-as-a-service
- Fortify On Premise** – Fortify's software licenses

SAST

Find and fix issues during Dev & QA

- Scans can be tuned for: High Speed or Complete Coverage
- Accurate: OWASP Benchmark: 100% true positive rate
- Scans offer improved speed

DAST

Test running apps in Dev, QA or Prod

- Scans can be tuned for: High Speed or Complete Coverage
- Incremental and instrumented scanning provide faster results

Recognized Leader

Gartner Magic Quadrant Leader for Application Security Testing (9+ Years)

Trusted by:

- 10 out of 10 of the largest information technology companies
- 9 out of 10 of the largest banks
- 4 out of 5 of the largest pharmaceutical companies
- 3 out of 3 of the largest independent software vendors
- 5 out of 5 of the largest telecommunication companies

Integrates with the tools you use

IDE	Source Control	CI/CD Servers	Open Source	Build Tools	Ticketing System
eclipse Visual Studio IntelliJ IDEA	GitLab GitHub Bitbucket	Jenkins Bamboo Azure DevOps	sonatype snyk WhiteSource BLACKDUCK	Maven Gradle	Jira Bugzilla

Learn more here: [Integration Ecosystem](#)

29+ programming languages

Support for ABAP/BSP, ActionScript, Apex, ASP.NET, C# (.NET), C/C++, Classic, ASP (with VBScript), COBOL, ColdFusion CFML, Go, HTML, Java (including Android), JavaScript/AJAX, JSP, Kotlin, MXML (Flex), Objective C/C++, PHP, PL/SQL, Python, Ruby, Swift, T-SQL, VB.NET, VBScript, Visual Basic, and XML, JSON/YAML and Docker (Dockerfile).

Build software resilience in these key use cases:

DevSecOps

- Fast, frictionless security without sacrificing quality
- Seamless security integrated with any tool, anywhere in the SDLC
- Give your developers the confidence to code securely
- Shift enterprise-grade DAST left for developers

Cloud Transformation

- Innovative API security for any application
- Comprehensive shift-left security for next-gen architectures
- Confidently secure your modern web apps
- Secure the entire mobile app attack surface

Securing the Software Supply Chain

- Detect security and license risks in third party software
- Protect the integrity of your source code & DevOps pipeline
- Evolve your supply chain for the future

Maturity at Scale

- Fortify: the AppSec Partner you can trust
- Industry leading holistic application security platform
- Built to support the challenges of the modern enterprise
- Empower your organization for AppSec success

What's New

Time vs Depth

Choose the level of depth in your testing efforts for a faster scan speed for time sensitive moments during development

SAST + DAST Correlation

ScanCentral DAST can now uncover correlations between DAST and SAST results and forward the information to Fortify Software Security Center.

API Discovery

You aren't aware of all your APIs – you don't always know there is an API in your application. Now WebInspect can detect APIs automatically.

Infrastructure-as-Code Support

Secure your cloud and virtual environments through scanning the technology used to create them.

Modern App Support

Engine updates ensure WebInspect keeps up to date with current trends and is always able to scan your applications

2FA Support

WebInspect now supports 2FA automatically so scans can avoid getting paused.
