

Case Studies

Challenge

- Find a cost-effective and user-friendly alternative to hardware token multi-factor authentication (MFA)

Result

- Reduced MFA management and costs
- Popular with end users – working to extend MFA to the application-level User-friendly solution

Identity Powers Security

Regulations

Over time, HIPAA and HITECH regulations have become more concrete and with increasing penalties

EHR Sharing

Clinicians and clinics are increasingly sharing EHRs

ePHI Access

Patients expect access to their health records to be convenient and secure

Telemedicine

Innovation and the recent pandemic has normalized telemedicine

Automate onboarding of new clinicians and patients with identity lifecycle management

Ensure that only the right people have access to EHRs through automated Governance

Confirm claimed identities through multifactor and passwordless technologies

Improve patient outcome through fast user switching at kiosk stations

Offer your patients secure access to their ePHI through a secure access gateway

NetIQ Identity Governance offers an analytics engine to protect EHRs from improper access

NetIQ Advanced Authentication offers a standards-based framework with the most native integrations to match your authentication needs

NetIQ Access Manager protects any digital resource against unauthorized access with identity-based access controls

NetIQ SecureLogin offers single sign-on and fast user switching for your clinician kiosks

NetIQ Identity Manager automates identity lifecycle management for all your clinicians and patients
