

**Privacy begins with data discovery**

Know your data. Protect what matters most. Safely use data with privacy by default.

- **File Analysis Suite:** Quickly find sensitive data, classify high-risk data, and secure data to minimize privacy risk.
- **Structured Data Manager:** Discover, analyze, and classify sensitive data in database repositories; automate risk remediation; and manage life cycle of high value data.
- **SecureData Enterprise:** Secure data continuously with our leading format-preserving enterprise data protection techniques to address privacy compliance.
- **SecureMail:** Best-of-breed, end-to-end encrypted email solution that ensures privacy compliance for desktop, cloud, and mobile.
- **SmartCipher:** Simplify unstructured data security with persistent file encryption, complete control, and visibility.

**Voltage Powers Data Discovery & Protection**

- **Continuously** monitor, manage and protect sensitive data.
- **Intelligently** discover and classify, enforce, protect and dispose of data.
- Insight enables **protection and compliance**.

**Discover, Protect, and Secure High-value Data:**

**80+**

Patents in privacy by default

**250+**

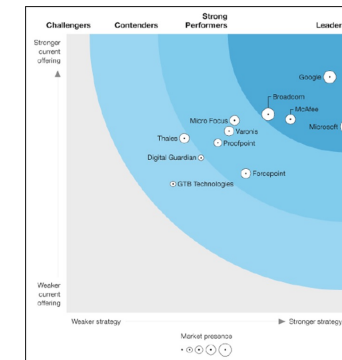

Protection functions

**#1**

Leader in dynamic data masking

**Recognized Leader**

The Forrester Wave Unstructured Data Security, Q2 2021

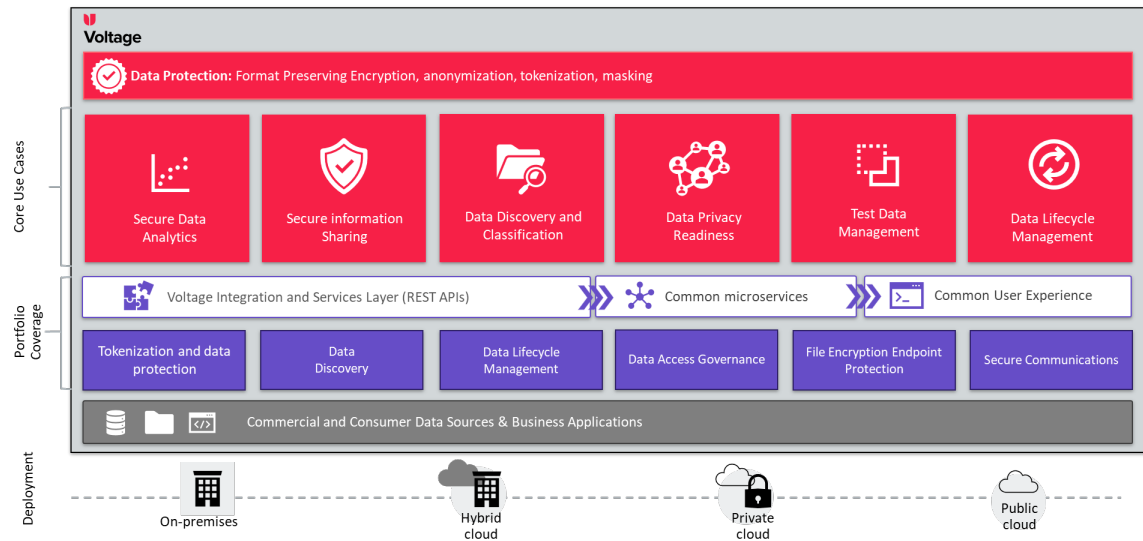

**Trusted Globally By:**

- Fortune 10 Telco with over 400,000 employees and \$125 billion in revenue
- Fortune 20 Bank with over 250,000 employees and \$100 billion in revenue
- Fortune 50 retailer with over 365,000 employees and \$70 billion in revenue
- Fortune 500 investment Bank with over 50,000 employees and \$10 billion in revenue

## Voltage Data Privacy and Protection Solution

## Voltage Data Discovery Solution is for:

Organizations who want to quickly find, secure, and protect sensitive and high-value data.

- **Find:** Minimize data and application sprawl along with information risk, while assessing the value of data (cost containment, data minimization, app retirement).
- **Secure:** Quickly identify sensitive data, apply risk scoring with accuracy, and highlight areas for remediation/protection (data risk assessment, test data management, privacy compliance).
- **Protect:** Protect data in use through masking, encryption, rights remediation, defensible deletion, legal hold, and data life cycle management (data protection, data life cycle management).

## Data Discovery Capabilities:

### File Analysis Suite:

- **A modern SaaS solution:** Experience instant project start-up and automatic scaling on a service-based architecture in the cloud.
- **Fast data scanning:** Discover at-risk data repositories within days, rather than weeks, with FAS SmartScan.
- **Optical Character Recognition:** Find sensitive data in scanned images and other types of media files with Optical Character Recognition (OCR).
- **Discover ROT data:** Scan to find redundant, obsolete, and trivial (ROT) data and reduce the clutter of unstructured data.

### Structured Data Manager:

- **Data discovery:** Scan for personal and sensitive data in databases, classify your data, and generate remediation processes.
- **Privacy protection:** Discover, analyze, and protect sensitive data and continuously monitor and manage the data lifecycle.
