

Accelerate SAP Basis Work

Get Orchestration for SAP
With the Go4SAP Solution Program

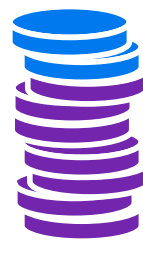

Companies need to **upgrade their SAP Basis foundations** to be ready for tomorrow's business and SAP demands.

They need to modernize critical business systems and employ new functionality, which will include:

But, many companies feel their hands are tied:

Maintenance of an SAP environment can consume over 74% of the SAP-directed IT budget¹

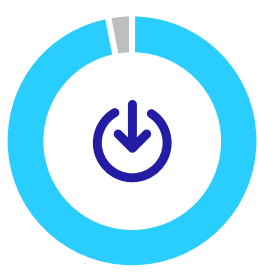

Typically, most SAP directed automation has been built around scripts, which can be problematic:

- Scripts are brittle and must be re-built every time your environment changes
- Too many manual steps are still required to successfully complete key actions

Move Faster with the Go4SAP Solution Program

Featuring Micro Focus Hybrid Cloud Management, together with tuned SAP content packs

Using Micro Focus Hybrid Cloud Management, you can experience the following reductions in time and FTE effort:²

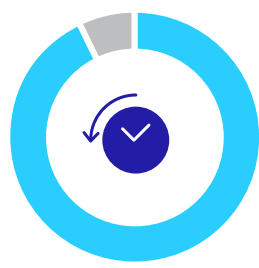

97% reduction in the time required for a new SAP Install

Includes provisioning/ de-provisioning complete SAP systems; such as standard, distributed, and new HANA environments

(Reduction down to 2 hours)

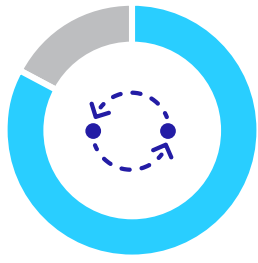

How long does it currently take you to provision a new SAP Install? For many of those surveyed, it took as many as 2-3 days.²

93% reduction in time for SAP daily routine actions

Routine actions may include managing SAP users, logon groups and RFC actions

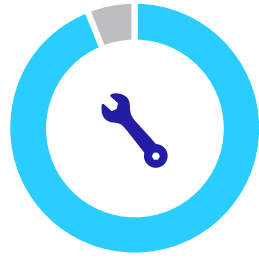

(Reduction down to 1 minute for repetitive actions)

83% reduction in time for SAP application lifecycle work

Such as copying a SAP Client

(Reduction down to 5 minutes)

94% reduction in time for SAP Maintenance activities
