Companies are adopting hybrid IT and moving to the cloud. However, it's not just one cloud, but multiple clouds both public and private. You need a configuration management solution that's flexible enough to handle multi-cloud, containers, and on-premises IT.

The vast majority of firms consider their cloud strategy as multi-cloud. Companies are adopting hybrid IT and moving to the cloud. 32% of companies pursuing multi-cloud strategies are using multiple public and private clouds for different application workloads... which is helping drive public cloud growth.

Multi-cloud discovery across public and private clouds, including containers:

Which clouds are organizations adopting?

Despite the risks, multi-cloud strategies are growing. The Risks and Rewards of Multi-Cloud:

86% Yes

Risks:
- Data privacy and protection
- Configuration compliance
- Management complexity

Rewards:
- Resource elasticity
- Affordable scalability
- Increased reliability

Worldwide Public Cloud Service Revenue Forecast ($B)

Did you know?

By 2022, over 90% of enterprises worldwide will be relying on a mix of on-premises/dedicated private clouds, multiple public clouds, and legacy platforms to meet their infrastructure needs.

On-premises private clouds                               Multiple public clouds                               On-premises infrastructure

2019 2020 2021 2022

$100 $200 $300 $400

Multi-cloud discovery and configuration management provide critical capabilities to speed your cloud adoption.

Control and compliance
- Transition to cloud
- Cost

Control cloud resources
- Enforce compliance to policies and best-practices
- Create a single source of truth for asset management, service management, and more
- Discover resource groups that can move to cloud
- Cut unused resources
- Only pay for the software you need

Migrate from on-premise to cloud
- Only pay for what you use

Visibility
- 90%

Micro Focus has deep multi-cloud discovery capabilities that enable full configuration management capabilities in the cloud.

Deep discovery of dependencies and resources deployed

Real-time, event-based discovery for multi-cloud, containers, and on-premises

Service and dependency mapping

Cost and chargeback management

Integration with service and asset management solutions

Cloud resource monitoring

Some of our multi-cloud configuration management capabilities include:

- Real-time, event-based discovery
- Multi-cloud resource monitoring
- Resource group discovery
- Policy enforcement
- Asset management integration
- Chargeback management
