

# Destination Cloud

Your journey to application modernization

## 92%

92 percent of organizations see COBOL and mainframe applications as a strategic necessity.\*

## Go!

Taking the steps to modernize these valuable assets must begin now.

For most organizations, the goal is the cloud.

The journey involves three important and achievable actions to get there.

1

### Get cloud-ready

Plan using code analysis tools. Move to commodity x86 hardware platforms. Adopt Agile and containerization for more reliable and faster application delivery.

2

### Migrate and optimize

Quickly extend application value into the cloud using virtualized, containerized and cloud platforms. Adopt DevOps and managed services (XaaS) such as databases, analytics, and storage.

3

### Go cloud-native

Embrace cloud-native architectures and reach higher levels of performance and reliability at lower cost. Deliver new business value faster by implementing DevSecOps and API-enabling applications.

So, if cloud is on your future application roadmap, or perhaps you're already on that journey, register for the webinar.

Let's explore how cloud, together with the right plan and partnership, can accelerate your digital transformation strategy.
