

Operations Bridge Integration Hub

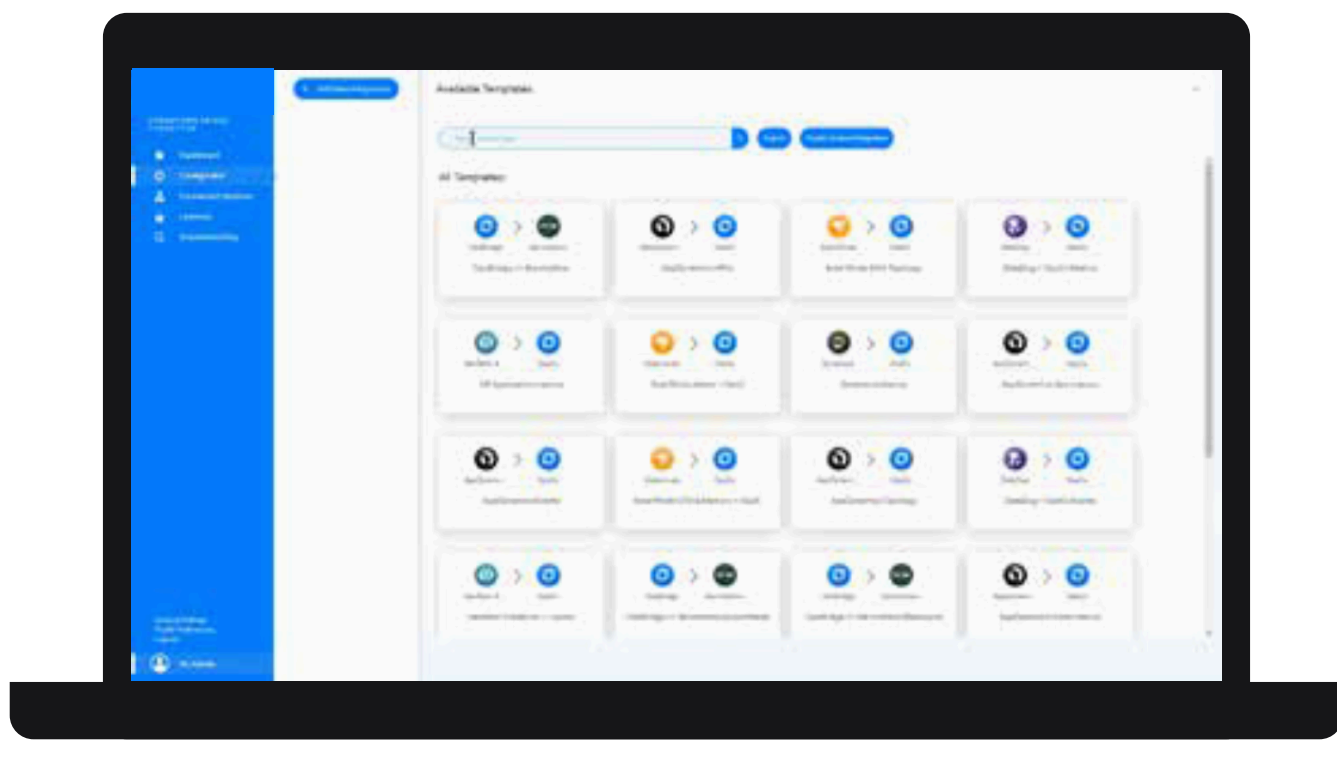

Get inspired to integrate.

OpenText™ Operations Bridge Integration Hub consolidates data and correlates events from multiple tools to improve your visibility.

Managing your complex IT infrastructure is hard.

Your IT environment is filled with siloed, incompatible, often redundant tools held together by fragile integrations. That's a lot to manage.

Complexity has consequences.

Caring for all your tools takes more time and effort than it should. But those aren't the only downsides.

Low visibility and minimal event correlation make it hard to find and fix problems fast enough.

Without a service-level view, you can't prioritize service impacts.

Multiple, frequently recurring tickets raise ITSM costs.

Staff focuses on integrations rather than more valuable work.

Benefits of Integrated Operations

Benefits of Integrated Operations Integrate your tools and you'll gain clear, accurate insights that help you do more, faster. A Digital Enterprise Journal survey of 1,100 IT professionals found that to be true.

58%

Companies issued fewer trouble tickets.

63%

Companies more likely to meet SLAs compared to others.

69%

Companies reacted faster to unplanned IT events.

A Better Way to Integrate

Operations Bridge Integration Hub makes it easy to integrate your tools—and improve visibility—across your IT estate.

“For us, the story is tying together all of the disparate systems. Micro Focus OpsBridge [now part of OpenText] is the only tool I know that lets you do that and automate management from a single pane of glass.”

Jay Rooney
Systems Analyst, Vancity
