

Master regulatory compliance and patching across the enterprise

with Micro Focus Data Center Automation

As compliance and risk pressures mount, it's easy to feel overwhelmed. Fortunately, Data Center Automation (DCA) **reins in** out-of-control processes, **automating regulatory compliance and patching** across your data center to **reduce risk** and **protect your brand**.

Are compliance and patch processes time-consuming and error-prone with a **mix of tools and manual work**?

+ Address all needs with one tool

Automate regulatory compliance and patching **across server OS, databases, and middleware**.

Support the broadest range of **multivendor** infrastructure.

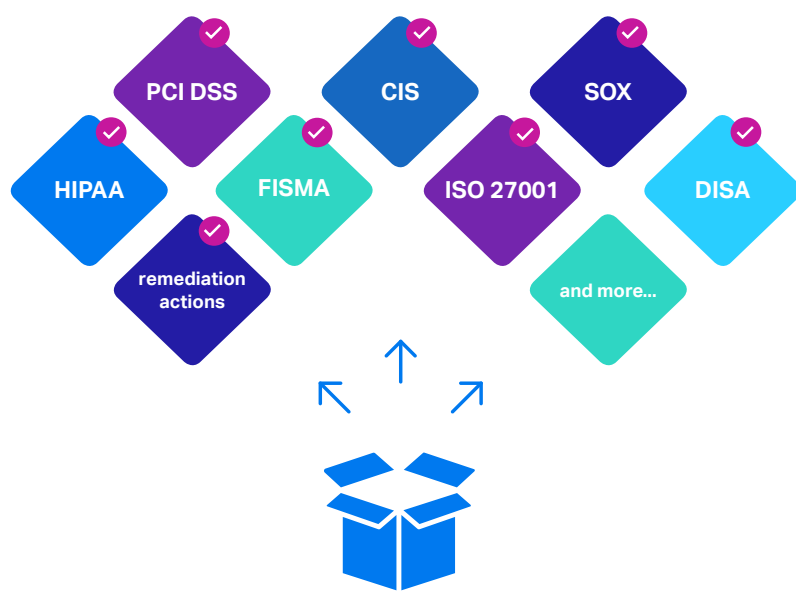

Discover and run compliance and patching on resources deployed by other configuration tools, including open source.

Keep the infrastructure you have, and **govern consistent security policies**.

As your infrastructure grows and evolves, can you run compliance and patching on every system, or do you contend with **inconsistent processes on random systems**?

+ Move to comprehensive compliance and patching

Work with **out-of-the-box compliance content**.

Set policies: Attach regulatory rules, patch bundles, and measurement and remediation objectives.

Tailor content to meet enterprise requirements.

Is remediation **taking too long**?

+ Count on closed-loop remediation

Remediate **immediately**

or

Remediate according to **maintenance windows** and **Service Level Objectives**

Set up and manage **any exceptions right** in DCA.

Use **out-of-the-box remediation actions**.

Are you **in the dark about regulatory compliance and risk state** across the data center? Can you quickly **respond to threats**? Is your company **audit-ready**?

+ Get clarity with one window into compliance and risk state

Visualize with actionable, drill-down **dashboards**.

See by:

- Benchmarks
- Latest critical and high CVE* threats
- Resources impacted
- Severity
- How long it took to remediate
- Compliance trend and vulnerability by age

Gain control with DCA

Experience a policy-based solution that centralizes regulatory compliance and patching, provides closed-loop remediation, offers out-of-the-box compliance content, and visualizes regulatory compliance and risk state in one place—across the entire data center.

* CVE is Common Vulnerability Exposure.

Reduce risk. Be audit-ready. Protect your brand.
