opentext™

Open Source Advantage:
Fortify with Sonatype

Fortify by opentext™ **+** ○ **sonatype**

Fortify™ by OpenText™ partners with Sonatype to help you manage your open source risk and secure your software supply chain.

1.
Integrated platform

Fortify combines static analysis (SAST) and software composition analysis (SCA) into a single platform. By integrating the results from the Sonatype platform and Fortify Static Code Analyzer, it empowers every engineering team with the needed intelligence to create and maintain secure, quality, innovative software at scale.

2.
Complete software bill of materials (SBOM)

Scans binaries to identify open source components and creates an SBOM, with remediation tips that include the next-known vulnerability version. Catalog SBOMs, allowing easy remediation and recall during an incident, improving response time and cost.

3.
First line of defense

Avoid costly supply chain attacks with early identification and automatic blocking of known vulnerabilities. Detect malicious and suspicious packages from popular ecosystems using next-generation AI behavioral analysis and automated policy enforcement.

4.
Largest database of public and private vulnerabilities

Managing risk effectively starts with great data, and Sonatype is driven by the most authoritative data in the industry. Sonatype uses artificial intelligence and machine learning, along with a dedicated team of engineers around the world focused on identifying and cataloging vulnerabilities to detect 70 percent more vulnerabilities than the NVD database alone.

5.
Build into your CI/CD pipeline

Scan any time in your pipelines, and configure to work with your current custom processes. Sonatype's integrations enable true shift-left application security for development teams, allowing you to seamlessly control open source risk while using your favorite tools to weave security seamlessly in existing workflows.

6.
Manage your software supply chain artifacts

Sonatype provides centralized, secure, and scalable repository management at the heart of your software supply chain.
