

The User Experience is Everything

Breaking news about mobile apps

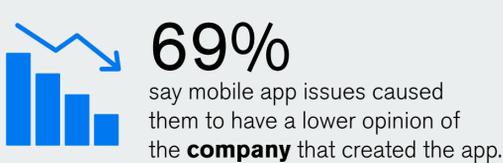

Give users a great experience or they'll **give you the finger.**

Statistics don't lie:¹ Mobile users have zero patience for poor performance, crashes, and battery-hogging mobile apps. Fix it or they'll delete you.

A lousy experience doesn't just kill your mobile app. **It kills your brand—then your business.**

They blame the mobile app, turn into haters, and take it out on your company.

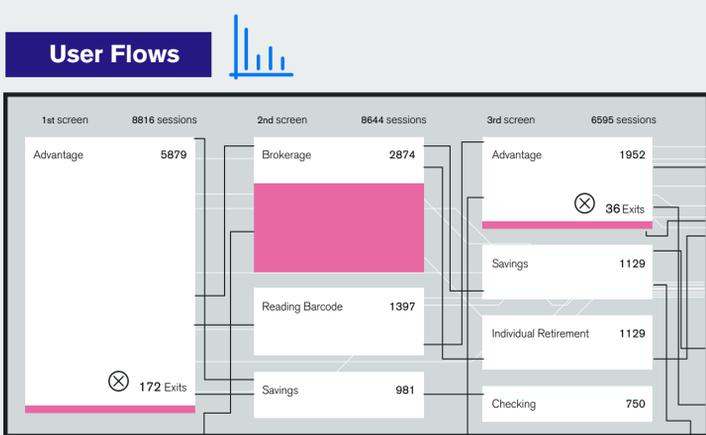

What's a mobility team to do? **Measure, focus, improve!**

Take a closer look at Micro Focus AppPulse Mobile monitoring software.

Focus and improve upon what users care about most.

Focus in the context of the user. Know how many users are impacted by which user actions, on which OS, device, or mobile app version. Improve by analyzing and sharing reports with the mobile app development team.

Focus on user interaction with your mobile app, screen by screen, with the User Flow feature. Follow the user journey and drill down to specific user actions. Understand where users exited or abandoned your mobile app.

Drill down and see metrics by OS, device type, mobile app version, and more.

Improve the health of your mobile app by sharing crash reports with the mobility team.

Track your **FunDex.**

The FunDex is a single score from 0 to 100 that encapsulates the average overall user experience. It unifies all aspects of the user experience measured by Micro Focus AppPulse Mobile and provides an accurate, relevant metric that can be used to prioritize development efforts for mobile apps according to business impact.

Everyone wants a 5-star mobile app.

Elevate your ratings with Micro Focus AppPulse Mobile monitoring software.
