Allianz

Allianz improves time to market at a lower cost with Micro Focus.

Overview
Allianz Insurance is one of the largest general insurers in the UK and part of the Allianz SE Group, one of the leading integrated financial services providers worldwide and the largest property and casualty insurer in the world. With approximately 142,000 employees worldwide, the Allianz Group serves approximately 78 million customers in more than 70 countries.

Allianz Managed Operations & Services SE (AMOS) is the internal shared-services provider to the Allianz Group. It provides Allianz with in-house services in the fields of IT, operations, and services—integrated, global, and from a single source, by experts for experts. AMOS charges the business for services delivered on a per man-day basis. AMOS currently supports over 60 applications on a variety of platforms.

Challenge
The main challenges that Allianz faced were the costs and time to market of its main retail application. The AMOS team was deploying three releases a day for this application, which required both Oracle database and WebSphere deployments. This was a resource-heavy, very time-consuming, and manual process. Highly paid technical resources normally engaged in Oracle and WebSphere deployments. Allianz was in a hurry to get a fix, and Micro Focus® Software quickly implemented a POC based on Allianz’s requirements, which demonstrated the potential for a reduction in resources of up to two people per release. The Micro Focus team accurately scoped out the POC and provided timely support. Allianz was already familiar with Micro Focus’s world-class support and reputation as an enterprise vendor, and as a result, Allianz selected Micro Focus Software to address these challenges.

Solution
WHY DEPLOYMENT AUTOMATION
The objective was to implement a “single click” deployment solution obviating use of the highly paid technical resources normally engaged in Oracle and WebSphere deployments. Allianz was in a hurry to get a fix, and Micro Focus® Software quickly implemented a POC based on Allianz’s requirements, which demonstrated the potential for a reduction in resources of up to two people per release. The Micro Focus team accurately scoped out the POC and provided timely support. Allianz was already familiar with and Micro Focus’s world-class support and reputation as an enterprise vendor, and as a result, Allianz selected Micro Focus Software to address these challenges.

Results
Since implementing Deployment Automation, the AMOS team has turned over the deployment tasks to the project team, where release managers and not Oracle DBAs actually perform all release deployments. The Oracle DBAs and WebSphere programmers are now free to focus full-time on creating value to the business. The process is a single, button-push deployment, and AMOS has seen significant time-to-market improvements at a significantly lower cost to the business.

**Challenge**
Allianz needed to reduce the cost and time to market for its main retail application.

**Solution**
Use Micro Focus software to implement a “single click” automated deployment solution.

**Results**
- Improved time to market
- Reduced costs
- Enabled programmers to focus on other tasks instead of deployment
“Serena (now part of Micro Focus) Deployment Automation has provided us with all the benefits that we expected it would, our original business case has been realized, and we now expect to gain further value as we roll it out to the rest of the organization.”

THE ROAD AHEAD
Moving forward, the AMOS team will be upgrading to the latest version of Deployment Automation and will begin to roll it out to other applications. “Serena (now part of Micro Focus) Deployment Automation has provided us with all the benefits that we expected it would, our original business case has been realized, and we now expect to gain further value as we roll it out to the rest of the organization,” says Chris Risebrow, Allianz Project Delivery Manager.
