

Filr Advanced Add-on for Open Enterprise Server Promotion

Enterprise file sharing requires a high level of security and accountability, thorough controls, and other features that empower IT to protect the enterprise's interests. Filr Advanced, which is an add-on to the free Filr entitlement, provides a different approach to enterprise protection, one that offers true enterprise file sharing, real-time collaborative co-editing, and secure mobile access.

1. Data leak prevention. We understand that your business revolves around your data. That's why OpenText™ Filr Advanced Edition helps you mitigate risk and prevent data loss. Filr Advanced gives you fine-grained control, ensuring that sensitive data is not shared outside your organization. Also included is protection from ransomware attacks and unauthorized file modification.

2. Secure online collaborative editing. Filr Advanced allows users to edit files online simultaneously and collaboratively and see each other's changes in real time. Administrators get total control to restrict copy/paste, watermark content with user's email addresses, and keep users from downloading sensitive data from the Filr repository while still allowing them to access and edit.

3. Multi-factor authentication. In today's world access to information needs protection from internal and external attacks. Multi-factor authentication in Filr advanced lets you enforce additional authentication factors to protect files. The power external user license extends this to external users.

4. Mail attachment management. Cut down the data and storage load on your network and Mail servers while enabling users to continue sending attachments. With the Filr Advanced Edition, users upload email attachments to Filr instead of to the Mail server (Exchange or GroupWise), so they can easily and securely send very large files as Filr attachments.

5. Multitenancy. Multitenancy allows you to build and manage independent Filr sites using a single infrastructure deployment. Each site will have its own configuration such as branding, security, and identity.
