

Top 5 Reasons to Start Using ZENworks Patch Management

ZENworks Patch Management protects servers and workstations from software vulnerabilities by helping you automate your regular maintenance patching and quickly identify and remediate devices impacted by critical emerging threats.

1. Leverage Your Current ZENworks Infrastructure. Because you are using OpenText™ ZENworks Configuration Management, you already have the pieces in place to use ZENworks Patch Management. All you need to do is activate the product in your zone and your devices will download the Patch Agent and begin detecting missing patches... and reporting them so that you can see the patch status of all your devices in OpenText™ ZENworks Control Center.

2. Patch Operating Systems and Applications. ZENworks Patch Management can patch your Windows, Mac, SLES, and RHEL servers and workstations, including both the operating system and third-party applications. Windows 11 23H2—not a problem. Microsoft .NET—included. Adobe Acrobat, Mozilla Firefox, Google Chrome, Microsoft 365, Microsoft Teams, and Zoom—all covered.

3. Automate Your Maintenance Patching. Regular, scheduled patching of devices is the best way to mitigate the threat from vulnerabilities. ZENworks Patch Management uses criteria-based policies and flexible scheduling to automate the application of patches based on impact (Security, non-Security), vendor, and more.

4. Track and Remediate Emerging Threats. ZENworks Patch Management tracks software vulnerabilities, identified by CVE IDs, on your devices. When critical threats emerge, you can easily see their impact on your devices and quickly apply the patches required to remediate the threats, without having to wait for your next schedule maintenance patching.

5. Monitor Everything Through ZENworks Control Center. Intuitive dashboards show you the patch status of your devices and the software vulnerabilities (CVEs) impacting them. From the dashboards you can drill down to specific devices, patches, or CVEs and take any actions that might be required to protect your devices.

Purchase OpenText™ ZENworks Patch Management by 30th April 2024 to receive a 12-month subscription at the 9-month subscription price.

To receive a free 60-day ZENworks Patch Management trial, please contact Jenny Whiteside, OpenText Sales, at jwhiteside@opentext.com.
