

Top Differentiations Data Protector for Cloud Workloads

Data Protector for Cloud Workloads is an agentless backup software solution for modern workloads. Providing enterprise class protection for Microsoft 365 workloads as well as an extensive range of hypervisors, containers, and cloud storage targets.

- 1. Microsoft 365 critical business data backup.** Business data is not protected by the Microsoft application but DP4CW provides the full protection and flexibility needed for enterprise operations. Protect your business-critical data in Exchange online, SharePoint online, Teams and OneDrive for Business from accidental deletion or malicious attack.
 - 2. Extensive hypervisor backup extends choice and flexibility.** VMware and Hyper-V may not be the best solution for your business for cost, functionality, or other reasons, but that does not mean your data should go unprotected if you use a different hypervisor. DP4CW offers backup protection for one of the widest range of hypervisors from AHV through to Xen.
 - 3. Multiple Cloud backup targets allow maximum savings for modern storage usage.** Cloud storage is now stable, secure and being widely adopted for public, private and hybrid use. This saves cost on infrastructure and provides great flexibility to scale up or down storage use as required. Different clouds have different benefits and being able to select the most suitable for your storage and backup needs further promotes flexibility and cost saving. DP4CW frees your choice to meet your requirements.
 - 4. Container backup for Kubernetes pods and volumes.** Container adoption and deployment continues to grow due to their inherent ability to be created, cloned, spun up and made extinct very rapidly. Providing backup capabilities for Kubernetes, Proxmox and OpenShift protects the applications and data being deployed.
 - 5. Simple and Flexible Licensing helps cost control, visibility.** A single license provides access to all the features available in OpenText™ Data Protector for Cloud Workloads and is based off a straightforward front-end capacity calculation. A similar license provides all Data Protector Premium functionality. If Opex is more attractive than Capex for your backup, then maybe the subscription pricing option is the right choice.
- Microsoft 365 data backup for SharePoint, Exchange, Teams, and OneDrive for Business
 - Hypervisor backup protection for KVM, Nutanix, Citrix Xen, Oracle VM, Proxmox, and many more
 - Container protection for Kubernetes, Proxmox, OpenShift
 - Cloud provider backup target support for Microsoft Azure, AWS S3, Ceph, Scalality, Alibaba Cloud, Google Cloud, Cloudian and others
 - Connect to Data Protector Premium for comprehensive, enterprise-wide backup protection across infrastructure, applications, tape, VMware and Hyper-V, and cloud.
 - Role Based Access Control for secure administration

- 6. Built-in security to restrict access and control backup operations.** With many built-in security capabilities including Role Based Access Control there are many layers of protection to prevent the backup data from being accessed by any unauthorized intruder.
- 7. Complete backup protection from cloud to tape.** Data Protector for Cloud Workloads seamlessly interfaces with Data Protector Premium to provide a comprehensive backup solution covering everything from traditional storage infrastructure, Virtual Machines, applications, unstructured data, cloud, and tape.
- 8. Experience and Trust in a product that is protecting your company's crown jewels.** OpenText™ Data Protector as a product is over 30 years old and has proven itself time and again to recover the data for major enterprise companies. While DP4CW is the newest product in the family it is surrounded by support, development, and field people with the depth of knowledge and experience to ensure your business is looked after.
- 9. Beyond Backup—Extensive ecosystem for IT operations.** There are benefits from dealing with a single company for many of your tools and applications. From simplified and reduced contact points to consolidated support and licensing processes. OpenText offers expertise and solutions regarding data security, OpenText™ Content Management, OpenText™ Analytics, OpenText™ Service Management, OpenText™ Data Privacy and Protection and many other areas. The Information Management and Governance portfolio products are a great place to start for discovering what additional benefits your company can achieve.
