

Security Intelligence

Safeguard your business with complete visibility into activity across the IT infrastructure, real-time threat detection, analytics, and investigation from any source, anywhere.

Micro Focus® ArcSight Investigate enables organizations to proactively respond to and decrease the impact of security incidents. Its comprehensive threat detection, analysis, triage, and compliance management SIEM platform dramatically reduces the time to mitigate cybersecurity threats and decreases the impact of cybersecurity incidents—such as data loss, equipment damage, and revenue loss.

ArcSight is one of the industry’s leading security information and event management (SIEM) solutions for collecting, analyzing, and assessing security events. The result is rapid identification, prioritization, and response to cyber security attacks and insider threats. ArcSight correlates users, logs, and NetFlow to understand the who, what, and where of information security.

Security Operations Process Efficiency

FTEs	Salary	Improvement	Savings
10	\$126k USD	25%	\$315,000 USD

Reduction in Auditing and Compliance Costs

FTEs	Salary	Improvement	Savings
3	\$126k USD	65%	\$331,000 USD

“ESM reveals security events to us that we were never able to detect before. We’re very happy with ESM and confident we can find threats before they compromise our network or disrupt business. ArcSight provides critical insurance against the damage modern cyberattacks can inflict on an organization.”³

56% Reduction in cybercrime costs¹

70% Query time reduction¹

90% Reduction in ‘false positives’¹

Example Business Case

A US-based retail organization with annual revenues of \$15 billion USD chose ArcSight for their security intelligence and event management needs. Improving their Security Operations Center (SOC) process efficiency was an important goal. Reducing PCI-DSS compliance audit readiness and audit costs was also a significant concern. Finally, they needed to reduce their internal (detection, investigation, containment, and recovery) cybercrime costs while simultaneously addressing the external (data loss, business disruption, and potential revenue loss) exposure. (In this case, the fully burdened salary of a security analyst is estimated at \$126,000 USD per year.)

The ArcSight platform helps to safeguard your business by giving you complete visibility into activity across the IT infrastructure. This includes external threats such as malware and hackers, internal threats such as data breaches and fraud, risks from application flaws and configuration changes, and compliance pressures from failed audits.

50% Compliance/legal cost reduction¹

Cybercrime Cost Avoidance¹

Cybercrime Costs	Improvement	Savings
\$18.268M USD	21%	\$3.836M USD

The cumulative benefits in the first year total \$4.83M USD. Assuming an investment of \$5M USD (22% support beginning in year 2, and excluding deployment and realization factors), the justification for investment is clear:

- 87% return on investment (ROI)
- \$4.52M USD net present value (NPV)
- 59% internal rate of return (IRR)
- 13-month payback period²
