

# BPT (Business Process Testing)

OpenText™ Business Process Testing (BPT) is an integrated, component-based test framework that helps accelerate functional test automation.

## What's New Over the Last 2 Years

### BPT Packaged Apps Kit for SAP Apps

BPT can now create SAP components, flows, and tests:

- BPT can now create components when learning SAP GUI Flows
- BPT can now create components when learning SAP Fiori Flows

### BPT Integration with OpenText™

#### UFT Digital Lab from OpenText™

#### ALM/Quality Center

- BPT now integrates with UFT Mobile from ALM/Quality Center

### Business Process Test Customization

The Business Process Test customization page now includes the following enhancements:

- Upload BPT test results to ALM/Quality Center as a single zip file
- Exclude component parameter values from the BPT Report View
- Define the level of Reporter.ReportEvent steps included in the BPT Report Viewer

### Test Script Tab for BPT

In the Test Plan tree, the Test Script tab now includes the following options:

- Launch BPT tests and flows in OpenText™ UFT One
- Expand or collapse all nodes in the Grid or Canvas view

### Execution Grid Tab

The Report pane now enables you to expand or collapse all nodes in the pane.

## Did You Know?

- BPT gives the power of automation to business analysts and subject matter experts, who can now capture high-level test flows with code-free features such as keyword-driven testing and data driving that mirror actual business processes by simply interacting with an application.
- BPT provides an intuitive, code-free, scriptless, web-based interface for capturing business process flows, storing them as components that can be used for both manual and automated tests.
- BPT uses a test framework approach to help build a repository of reusable test modules—making tests more readable and easier to maintain. When things change, make the change once, and

watch the revisions propagate across all tests that use a specific component.

- BPT can reduce test creation time, condense testing cycles, improve the use of available testing resources, and improve business visibility of testing by generating automated reports.
