

BPT (Business Process Testing)

Micro Focus Business Process Testing (BPT) is an integrated, component-based test framework that helps accelerate functional test automation.

What's New Over the Last 2 Years

BPT Packaged Apps Kit for SAP Apps

BPT can now create SAP components, flows, and tests:

- BPT can now create components when learning SAP GUI Flows
- BPT can now create components when learning SAP Fiori Flows

BPT Integration with UFT Mobile from ALM/Quality Center

- BPT now integrates with UFT Mobile from ALM/Quality Center

Business Process Test Customization

The Business Process Test customization page now includes the following enhancements:

- Upload BPT test results to ALM/Quality Center as a single zip file
- Exclude component parameter values from the BPT Report View
- Define the level of Reporter.ReportEvent steps included in the BPT Report Viewer

Test Script Tab for BPT

In the Test Plan tree, the Test Script tab now includes the following options:

- Launch BPT tests and flows in UFT One
- Expand or collapse all nodes in the Grid or Canvas view

Execution Grid Tab

The Report pane now enables you to expand or collapse all nodes in the pane.

Did You Know?

- BPT gives the power of automation to business analysts and subject matter experts, who can now capture high-level test flows with code-free features such as keyword-driven testing and data driving that mirror actual business processes by simply interacting with an application.
- BPT provides an intuitive, code-free, scriptless, web-based interface for capturing business process flows, storing them as components that can be used for both manual and automated tests.
- BPT uses a test framework approach to help build a repository of reusable test modules—making tests more readable and easier to maintain. When things change, make the change once, and

watch the revisions propagate across all tests that use a specific component.

- BPT can reduce test creation time, condense testing cycles, improve the use of available testing resources, and improve business visibility of testing by generating automated reports.
