

ChangeMan ZMF

ChangeMan ZMF provides software change and release management for z/OS, ensuring quality at every stage of the mainframe software delivery life cycle

What's New Over the Last 2 Years

The OpenText™ commitment is to support core business applications—on both the platforms required today as well as the next set of technologies needed tomorrow.

OpenText™ ChangeMan ZMF 8.2 delivers new capabilities that protects corporate assets and helps mainframe developers get more done in less time. It is a comprehensive system that enables reliable and streamlined software change in a z/OS environment.

Product Highlights

ChangeMan ZMF protects corporate IT assets and lets developers get more done in less time. It is a comprehensive system that provides reliable and streamlined implementation of software changes in a z/OS environment. It manages and automates the process of migrating software changes from development through to production guaranteeing source-to-load integrity and ensuring that only successfully tested programs make it into production.

Release highlights include:

- Support for evolving customer demand, including new support for Mobile and web based approvals allowing approvers to list and sort packages requiring approval, view package information and Approve/Reject.
- Ongoing commitment to supporting the mainframe environment, including new support for z/OS Connect to allow ZMF to manage API archives as package components.

- Ongoing commitment to customer success, including a significant number of customer driven enhancements including zOSMF support, Security improvements with new exits and CICS and DB2 currency.

Did You Know?

Over 85% core business applications are considered strategic and tightly linked to future business goals. In fact, industry analysts state that over 90% of existing applications will remain in place for the next five years. That being said, business-critical systems and strategy rarely stand still. 50% of surveyed customers plan to modernize their applications over the next 18 months, and the pace of change is accelerating. The question becomes—how to deliver faster without breaking things?

For over 40 years, OpenText has helped thousands of organizations modernize core business systems. Our unique and comprehensive approach to modernization enables IT teams to transform application assets at the pace that suits the business. Additionally, the OpenText methodology delivers a flexible set of options across the application, the delivery process and the infrastructure offering a holistic approach to IT modernization. British Airways

“Supporting development for our most critical applications requires a full sign-off, audit, and tracking process. With ChangeMan ZMF, we can easily control the process by which software gets moved through the stages of testing and audit into production.”

JIM DIXON

Infrastructure Engineer
