

# Enterprise Suite

The Enterprise product suite improves application modernization for IBM mainframe PL/I and COBOL development and operations teams. Our enterprise application knowledge, development, test, and workload deployment tools improve efficiency and time to market.

## What's New Over the Last 2 Years

The OpenText™ COBOL commitment is to support core business applications—on both the platforms required today as well as the next set of technologies needed tomorrow. The OpenText™ Enterprise Suite enables IT teams deliver better applications, faster while transforming their core business asset—the mainframe.

Our comprehensive and flexible analysis, development, test, and deployment solutions for IBM mainframe applications supports modernization activities across applications, process and infrastructure.

With OpenText™ you can:

- Build next-generation services for integrating core business processes and new digital systems.
- Modernize your mainframe application delivery process with practices and tools for implementing Agile and DevOps.
- Choose where to deploy core mainframe applications, across host, server and Cloud.

## Product Highlights

This product set delivers new capabilities enabling development teams to quickly build, test, modernize and deploy the same mainframe application workload across mainframe, Linux, virtual, Docker container, or Cloud platforms. Using the scale out capabilities added in this release, applications deployed onto the Enterprise Suite can scale to meet the performance and transaction throughput requirements from the business whilst ensuring that the systems deliver Continuous Availability.

- **Scalability**—Significant investment in new scale-out capabilities to support deployment of robust and scalable applications across cloud environments
- **Administration**—Powerful new administration UI for deployed mainframe applications
- **High availability** of data files with support for database hosted VSAM files with no application change
- **Skills**—Additional capabilities for improving application knowledge and understanding
- **PL/I**—Continued investments in support for IBM Enterprise PL/I compatibility, development and testing
- **Certification**—support for VS2019 and Eclipse Photon environments
- **Secure**—TLS 1.3 support and a Secrets Vault to support storage passwords or sensitive information using a common facility to encrypt data.

## Did You Know?

Over 85% of COBOL applications are considered strategic and tightly linked to future business goals. In fact, industry analysts state that over 90% of existing applications will remain in place for the next five years. That being said, COBOL systems and business strategy rarely stand still. 50% of surveyed customers plan to modernize their applications over the next 18 months. The question becomes—where to start?

## Banca Popolare di Sondrio

**"Adopting the Micro Focus (now part of OpenText) solution has enabled us to boost developer productivity by 20 percent. This in turn helps us cut time-to-market for new services for customers and business users."**

**MILO GUSMEROLI**  
VP

For over 40 years, OpenText has helped thousands of organizations modernize core business systems written in COBOL. Our unique and comprehensive approach to modernization enables IT teams to transform application assets at the pace that suits the business. Additionally, the OpenText methodology delivers a flexible set of options across the application, the delivery process and the infrastructure offering a holistic approach to IT modernization.
