What’s New

Fortify on Demand

Fortify offers the most comprehensive static, dynamic and mobile application and security testing technologies, along with runtime application monitoring & protection, backed by industry-leading security research.

Fortify solutions can be deployed on-premise or as a service to build a scalable, agile application security program that meets the evolving needs of today’s IT organization.

Fortify on Demand delivers application security as a service, providing customers with the security testing, vulnerability management, secure development training, expertise, and support needed to easily create, supplement and expand a Software Security Assurance program.

What’s New Over the Last 2 Years

- All Fortify customers can request a complimentary application discovery scan once a year by Fortify on Demand.
- Fortify on Demand Continuous Application Monitoring (CAM) provides valuable information about applications in production. Continuous Application Monitoring combines lightweight, production-safe dynamic vulnerability scanning and application risk profiling to alert when risk-relevant changes occur. Dynamic subscriptions now include CAM at no additional charge.
- Microservices are now addressed as a separate type of application to better support services-oriented architecture.

Did You Know?

- Fortify on Demand scans take minutes for most projects with fully automated auditing.
  - 74% of Static assessments complete in less than an hour.
  - The average Mobile assessment completes in under five minutes.
- Fortify on Demand provides a full suite of integrations with leading DevOps tools from IDEs (Eclipse, Visual Studio, IntelliJ) to CI/CD (Jenkins, etc) to bug trackers (ALM Octane, etc).
- Many important product usage tips are available via Fortify Unplugged Videos. Additionally important tools and integrations can be accessed via the Fortify Market Place.

Change Healthcare

“Fortify really addresses the needs of the developers. They got into the Fortify tools. They understand it. To make a successful, secure software cycle development program work, security has to be in the hands of the developer. That’s what Fortify does. It saves us $2M per year in outsourcing costs to third-parties.”
