StarTeam 15.1—What's New

StarTeam® is the Micro Focus® software change and configuration management (SCCM) solution. With today's software organizations needing to develop and share changes across geographies it's imperative for these teams and users to be able to have full visibility of their software deliverables and to provide full change management capabilities for their entire software delivery process.

StarTeam manages and tracks source code changes—including change requests, defects, tasks, requirements, user stories and discussions—throughout the SDLC. It delivers changes across any tool and repository. StarTeam's software configuration management works for both centralized and geographically distributed software development teams, while maintaining visibility and traceability across all your software assets, acting as your single source of truth.

StarTeam Server Improvements

The following are the new features for this release of the StarTeam server:
