

Micro Focus and the Mainframe: Decades of Enterprise Expertise

Micro Focus provides enterprise software to help organizations build better zEnterprise applications faster

Micro Focus provides innovative software that allows companies to develop, test, deploy, assess and modernize business-critical enterprise applications. Micro Focus' software helps customers' business applications to respond rapidly to market changes and embrace modern architectures with reduced risk. Founded in 1976, Micro Focus has more than 18,000 customers and more than 2 million licensed users, including 91 of the Fortune Global 100 companies.

With the undisputed importance of the IBM mainframe at the heart of global business computing, Micro Focus has long since been a proponent of the mainframe environment, and its products have supported IBM mainframe technology for decades.

The Micro Focus Enterprise product set aims to help tackle the application modernization needs of IBM mainframe teams. The zEnterprise* technology provides mainframe application knowledge, development, test and workload optimization capabilities. It can significantly improve business application delivery, accelerating delivery by up to 50 percent and increasing user efficiency by more than 100 percent.

Micro Focus' Business Partner status with IBM

With IBM's leadership position as a cornerstone of the mainframe market, Micro Focus sees IBM as a strategically important partner.

Starting with its COBOL Workbench products in the 1980s, Micro Focus has built products for a range of IBM platforms over three decades, partnering with IBM on a variety of initiatives since as far back as AD/Cycle. Most recently Micro Focus has supported the IBM zEnterprise product line, providing application development products to enable clients to efficiently build and deliver core zEnterprise systems.

In April 2013, Greg Lotko, former vice president and business line executive, IBM System z, said: "The IBM zEnterprise System, a result of more than \$1 billion in R&D investments over the past four years, provides our clients with significant enhancements in handling data, analytics, cloud and security, as well as the traditional focus areas of performance, security, availability and other key enterprise features. We are continually working with our technology partners to help our clients maximize the value in their IBM mainframes, and this latest innovation from Micro Focus is a great example of that commitment."
