

# Fortify Security Assistant

Find and fix security vulnerabilities in real time with the developer's security "spell checker." Here's how it works:

**1 Install Security Assistant.** Security Assistant is integrated directly into Visual Studio or Eclipse using a lightweight installer with no configuration required.

**2 Get real-time analysis.** Receive immediate security feedback as code is being developed.

**3 Get real-time feedback.** Receive explanations, recommendations, and references to make immediate remediation decisions for each detection.

**4 Make informed decisions.** Fix each issue with confidence knowing that only high confidence issues are flagged. Developers can also customize which issues are shown.

Find and fix 20 percent of your security issues before ever checking in your code.

- ✓ Highly accurate
- ✓ Easy to use
- ✓ Real-time analysis as you code
- ✓ Easy, lightweight installation
- ✓ Detailed remediation advice
- ✓ Purpose-built analyzers
- ✓ Solution or project wide
- ✓ Built directly into your IDE
