A Documentation Updates

About This Guide

This guide describes how to use the Client for Open Enterprise Server for Windows features available in the Client notification area. This guide contains the following sections:

- Chapter 1, "Using the Client for Open Enterprise Server," on page 7
- Chapter 2, "Using OES Utilities," on page 19
- Chapter 3, "Configuring Your User Account," on page 35

Audience

This guide is intended for users of the Client for Open Enterprise Server.

Feedback

We want to hear your comments and suggestions about this manual and the other documentation included with this product. Please use the User Comments feature at the bottom of each page of the online documentation enter your comments there.

Documentation Updates

For the latest version of this documentation, see the Client for Open Enterprise Server online documentation (https://www.microfocus.com/documentation/client-for-open-enterprise-server/2-sp6/).

Additional Documentation

For information on installing the Client for Open Enterprise Server, see the *Client for Open Enterprise* Server Installation Quick Start.

For information on administering the Client for Open Enterprise Server, see the *Client for Open Enterprise Server Administration Guide*.

For information on login scripts, see the Novell Login Scripts Guide.

Using the Client for Open Enterprise Server

The Client for Open Enterprise Server software extends the capabilities of Windows 11, Windows 10, Windows 8, and Windows 7 workstation, Windows 2012 server, Windows 2016 server, Windows 2019 server, and Windows 2022 server desktops by providing access to NetWare[®] and Open Enterprise Server (OES). When installed on Windows 11, Windows 10, Windows 8, or Windows 7 workstations, Windows 2012 servers, Windows 2016 servers, Windows 2019 servers, or Windows 2022 servers, the Client lets you enjoy the full range of OES services, such as authentication via eDirectory[™], network browsing and service resolution, and secure and reliable file system access. The Client for Open Enterprise Server supports the Novell traditional NCP[™] protocol.

For information on installing the Client for Open Enterprise Server, see the Client for Open Enterprise Server Installation Quick Start.

This section contains the following information:

- Section 1.1, "How Do I Use the Client Tray Application Menu?," on page 7
- Section 1.2, "Logging In to the Network," on page 8
- Section 1.3, "Logging Out of a Network Location (Server or Tree)," on page 11
- Section 1.4, "Viewing Your Network Connections," on page 12
- Section 1.5, "Mapping Network Drives," on page 12
- Section 1.6, "Disconnecting a Mapped Drive," on page 13
- Section 1.7, "OES Utilities," on page 14
- Section 1.8, "Configuring Your User Account," on page 14
- Section 1.9, "Creating a Customized List of Browseable Paths," on page 14
- Section 1.10, "Configuring the Client Tray Application Icon," on page 15
- Section 1.11, "Updating the Client for Open Enterprise Server," on page 16
- Section 1.12, "Configuring Client Properties," on page 17

1.1 How Do I Use the Client Tray Application Menu?

Many of the Client for Open Enterprise features are available when you right-click the Client Tray Application **D** icon in the notification area of the taskbar, located in the bottom right portion of your screen.

Figure 1-1 Icon in the Notification Area of the Taskbar

Right-clicking a Network folder also displays a menu of workstation features, where Client features are preceded by an D logo.

Figure 1-2 Sample Network Folder Right-Click Menu

	Open
	Open in new window
	Restore previous versions

Q,	Salvage Files
Ο,	Purge Files
Ο,	Trustee Rights
Q,	Inherited Rights and Filters
	Disconnect
	Сору
	Create shortcut
	Rename
	Properties

Right-click 🔲 in the taskbar to see the following menu:

Figure 1-3 Tray Application Menu

OES Login OES Connections	
OES Map Network Drive Disconnect Network Drive	
OES Utilities	×
User Administration for Browse To	+
Configure System Tray Icon Update Client Client Documentation and Help	
Client Properties	

The **D** icon is automatically added to the notification area when you install the Client. If the Client tray icon is removed from the notification area for any reason, you can restore it by double-clicking C:\Program Files\Novell\Client\nwtray.exe in Windows Explorer.

1.2 Logging In to the Network

When you log in to the network, you gain access to directories and files as well as other services provided by OES servers. Your network administrator should provide you with the required information so that you can log in.

- 1 Right-click , then click **OES** Login.
- 2 Type your username and password, then click Advanced.

Client for	Client for Open Enterprise Server Login					
[]						
Username: Password:	<u> </u>					
Did you forge	t your password?					
eDirectory	Script NMAS					
Tree:	▼ Trees					
Context:	▼ Contexts					
Server:	▼ Servers					
	OK Cancel	Advanced <<				

3 Specify the tree, context, and server information for the server you want to connect to.

You can type a DNS name or an IP address for the server. See your network administrator for this information.

If your network has SLP set up, you can browse a list of available trees, contexts, and servers by clicking their associated buttons.

4 (Optional) To run login scripts during this login session, click the Script tab, then select the options needed to run the login scripts.

For more information on login scripts, see Section 1.2.2, "Running Novell Login Scripts During Login," on page 11.

5 Click OK to log in to the server specified in Step 3.

1.2.1 Logging In to the Network With Advanced Authentication Enabled

If Advanced Authentication Client is enabled to be used during eDirectory login, when a network login is attempted from the desktop, the Client for Open Enterprise Server presents an additional tab, **Advanced**, in the eDirectory login dialog. On this tab you can specify the Advanced Authentication user and server information.

Client for Open Enterprise Server Login						
Micro Focus [®] Client for Open Enterprise Server [®] for Windows						
Username: eD	DirUser 1					
Did you forget your	password?					
eDirectory Scrip	eDirectory Script Advanced Authentication NMAS					
Advanced Authe	entication Logon Information:					
Username:	AAUserUser1					
Repository:	AACLIENTTREE					
Server:	10.10.10.1					
	OK Cancel	Advanced <<				

If a separate username is not specified, the eDirectory username that was specified is used as the default Advanced Authentication username.

Proceeding with the login provides an interface for Advanced Authentication logon based on the Advanced Authentication method configured for your account.

Upon successful Advanced Authentication logon, the network login proceeds transparently.

1.2.2 Running Novell Login Scripts During Login

When you successfully log in to the network, one or more login scripts are executed. Login scripts can be used to automatically map drives and search drives to directories, display messages, set environment variables, and execute programs or menus.

You can specify whether login scripts are run, whether the results are displayed, and whether the login window is automatically closed during login. In addition, if the login script uses the %2, %3, %4, or %5 variables, you can set these variables by clicking the Variables button.

Figure 1-4	Script Tab	on the Novell	Login Dialog Box

Run scripts	ults window
Login script: Profile script:	<default> </default>
	OK Cancel Advanced <<

Your network administrator should provide information on whether to use login scripts and, if so, which login scripts to use.

For additional information on setting up login scripts, see the Novell Login Scripts Guide.

1.3 Logging Out of a Network Location (Server or Tree)

- **1** Right-click **D**, then click **OES Connections**.
- 2 Select the server or tree that you want to log out of.

NOTE: Logging out of a tree logs you out of all resources on that tree.

3 Click Detach, then click Close.

1.4 Viewing Your Network Connections

OES Connections allows you to see what servers and trees you are logged in to. You can refresh connections, set a specific tree as your primary connection, or log out of a tree or server.

1 Right-click **D**, then click **OES Connections**.

DES Connections	- In the second s				×
You are attached to the f	User Name	Conn No.	Authentication St	eDirectory Tree	Trans Type
* SLES 10SP4_TREE * SLES 10SP4	CN=admin CN=admin	12	eDirectory Services	SLES 10SP4_TREE	IP
•					Þ
Detach Se	t Primary	Refresh			Close

- **2** Do any of the following:
 - Set a connection as the primary connection: Select the server you want to set as the primary connection, then click Set Primary.
 - **Refresh a connection:** Select the connection that you want to refresh, then click **Refresh**.
 - **Disconnect from a connection:** Select the connection you want to detach from, then click **Detach**.
- 3 Click Close.

1.5 Mapping Network Drives

When you map a drive, you create a connection to a drive on the network. After the drive is mapped, you can use it like a local hard disk, provided you have sufficient rights on the drive. You can map to a specific folder on the drive or to the root of the drive.

1 Right-click **I**, then click **OES Map Network Drive**.

Map Drive		×
Assign a network folder or vo	lume to a drive letter on your workstatio	n.
Choose the drive letter to map		
🚍 E:	-	Map
Enter the network path to the	resource:	Disconnect

Check to make folder app	pear as the top most level	
Check to always map this	drive letter when you start Windows	
Map <u>S</u> earch Drive	Path Environment Variable Inserti Put search drive at geginn Put search drive at gnd of Close	ing of path

- 2 Select the drive letter you want to use for the network connection.
- **3** Specify the path to the directory you want to map.

The path can be in either of these formats:

Universal Naming Convention format: \\server\volume\directory\subdirectory

OES format: *server**volume*:*directory**subdirectory*

NOTE: A volume is a segment of a server. The volumes of a server display next to folder icons when you double-click a server.

You can also click the Browse button and locate the directory you want to map.

4 (Optional) To reestablish this drive mapping the next time you log in, select Check to always map this drive letter when you start Windows.

TIP: To prevent the automatic drive mapping in the next log in, disconnect the mapped drive.

5 (Optional) Select Map Search Drive if you want to specify the drive as a search drive.

If you select **Map Search Drive**, you can choose whether this mapping should be at the beginning or the end of the path.

6 Click Map.

1.6 Disconnecting a Mapped Drive

1 Right-click 🖸 > Disconnect Network Drive.

😼 Disconr	Disconnect Network Drives					
Select the	Select the network drive(s) you want to disconnect, then click OK.					
<u>N</u> etwork I	Drives:					
Name						
	SYS (\\LINUX-6A06) (E:) AD	MN (\\LINUX-6A06) (M:)				
2	4.92 GB free of 7.72 GB	ytes free of 0 bytes				
	SYS (\\LINUX-6A06) (R:)					
S	4.92 GB free of 7.72 GB					
	452 05 1100 01 7172 05					
		OK Cancel				

- 2 Select the drives that you want to disconnect.Shift+click or Ctrl+click to select more than one drive.
- 3 Click OK to disconnect the selected drives.

1.7 OES Utilities

You can access various OES utilities, such as OES Copy, Salvage, Purge, and Inherited Rights and Filters, by selecting the **OES Utilities** option on the **D** menu. For more detailed information, see Chapter 2, "Using OES Utilities," on page 19.

1.8 Configuring Your User Account

You can view or configure various aspects of your user account by selecting the User Administration for option on the D menu. For more detailed information on these options, see Chapter 3, "Configuring Your User Account," on page 35.

1.9 Creating a Customized List of Browseable Paths

You can use the Browse To feature to create a customized list of browseable paths. If you often use the same locations on the network, you can add these locations to your paths list. Then, when you need to go to one of those locations, you can select it from the list rather than browsing the network to find the location.

Browseable paths let you quickly access frequently used files without mapping drives every time you log in. Too many mapped drives can considerably lengthen the time it takes to log in. Browseable paths also help you find those locations you use frequently but don't normally map to, as well as those that you use infrequently and can never remember.

1.9.1 Adding a Browseable Path

1 Right-click **D**, then click Browse To > Edit Browseable Path.

Edit Browseable Paths	×				
Set the UNC paths that display in the Browse To pop-up menu available when you right-click the Client system tray icon.					
Add this path:					
	Add				
List of entered paths: To remove a path, click it then click Remove.	Browse				
	Remove				
Close					

2 Specify the path that you want to add.

If you're unsure of the path, browse the network until you find the location you want to add.

3 Click Add.

The locations you add are automatically added to the Browse To menu.

1.9.2 Using a Browseable Path

- 1 Right-click 🗖, then click Browse To.
- 2 Click the path you want to access.

You can also select from the following options:

Computer: Opens the Windows Computer folder. The Computer folder gives you access to locations such as your hard drive, CD or DVD drives, removable media, and network locations that are connected to your computer. You can also access other devices connected to your computer, such as external hard drives and digital cameras.

Network: Opens the Windows Network folder. The Network folder gives you access to computers and devices on your network. You can view the contents of network computers and find shared files and folders. You can also view and install network devices, such as printers.

1.10 Configuring the Client Tray Application Icon

You can configure the **I** icon so the features you use most often are available by double-clicking or by pressing Shift when you double-click the icon. By default, double-clicking the icon opens the Windows 7 Network dialog box. Pressing Shift when you double-click the icon opens the OES Map Network Drive dialog box.

1 Right-click **D**, then click Configure System Tray Icon.

Configure System Tray				
Specify what happens when you double-click the Client system tray icon.				
Double-Click opens:				
Network 🔹				
Shift + Double-Click opens:				
OES Map Network Drive 👻				
OK Cancel				

- 2 Click the drop-down lists to display the functions that can be configured, then select the function you want.
- 3 Click OK.

1.11 Updating the Client for Open Enterprise Server

The Client software and properties can be updated at any time specified by your administrator. You can run the Client Update Agent either automatically without intervention, or manually by selecting **Update Client** from the **D** menu.

For more information on enabling Client updates, see Update Agent Settings in the *Client for Open Enterprise Server Administration Guide*.

- **1** Right-click **D**, then click **Update Client**.
- 2 If a Client update is available, you see a message displaying the currently installed version of the Client and the new version of the Client.

Novell Automatic Client Upgrade		
A newer version of the Novell Client Software is available. Currently installed: Novell Client SP1 for Windows Vista New version:		
Novell Client 2 for Windows Vista/2008 Would you like to upgrade the Client to the newer version?		
<u>Y</u> es <u>N</u> o		

3 Click Yes, then follow the online instructions to update the Client.

The Client Installation runs, your workstation reboots, and you are prompted to log in by using the OES Network login tile.

If no Client updates are available, you see a message saying that the Client for Open Enterprise Server does not need to be updated.

1.12 Configuring Client Properties

1 Right-click , then click **Client Properties**.

Client Properties						
LI	DAP Conte	xtless Login		Name	Services	
Service	Location	Advanced S	ettings	s Advanced Menu Settings		
Client	System L	ogin Profiles	Advan	ced Login	Update Agent	
Produc	t name:	Client for (IR3)	Open Er	nterprise Se	rver 2 SP4	
OK Cancel						

2 Use the options in the Client Configuration dialog box to configure the way the Client works in your network.

Do not change any properties without first contacting your network administrator. Changing properties can damage the performance of your network connections and can prevent you from logging in to the network.

For more detailed information, see Setting Client Properties in the Client for Open Enterprise Server Administration Guide.

3 Click **OK** to close the dialog box.

You can access various OES utilities by selecting the **OES Utilities** option from the **D** menu. The options on the submenu let you do the following:

- Section 2.1, "Copying Files to or from a Volume," on page 19
- Section 2.2, "Assigning Rights to Volumes, Files, and Directories," on page 22
- Section 2.3, "Setting Inherited Rights and Filters," on page 24
- Section 2.4, "Viewing and Setting Object Properties," on page 26
- Section 2.5, "Salvaging and Purging Deleted Files," on page 30
- Section 2.6, "Sending a Broadcast Message," on page 34

2.1 Copying Files to or from a Volume

The OES Copy utility lets you copy files or folders to or from any location you have access to on the network to another network location.

For example, you can use OES Copy to keep two directories synchronized and to preserve OES attributes during a copy.

OES Copy is especially useful if you want to back up your data to a server. Select the parent directory, select **OES Copy**, and then select the **Copy file only if newer** check box. This copies only files that have changed, which is a much quicker operation than copying the entire directory structure again.

- 1 Right-click , then click OES Utilities > OES Copy.
- 2 Browse to and select the files or folders you want to copy.
- 3 Click OK.

The OES File Copy Utility dialog box appears.

OES File Copy Utility					
Specify how a file will be copied, and the attribute will have in its new location.					
Copy from \\SLES10SP4\V1\test path:	Cancel				
Copy these files and folders:

Co	py subdirectories				
OES File Attributes					
✓ Archive Needed Execute Only	Read Only				
Shareable Hidden					
Transactional Purge Immediate	System				
Rename Inhibit Don't Migrate	Immediate Compress				

4 Select the file copy options you want applied to the files you are copying.

Keep attributes on copy: Don't change the file attributes when you copy the file. The file will have the same attributes in the destination location that it has in the source directory.

Modify attributes on copy: Assign different attributes to the file after copying it than it has in the source directory. Specify the attributes you want to assign to the file in the **OES File Attributes list**.

Copy file only if newer: Copy the file to the destination directory only if the file you are copying is newer than the file with the same name that already exists in the destination directory. If the file does not exist in the destination directory, the file is copied to the destination directory.

Copy file only if already exists: Copy the file only if a file with the same name already exists in the destination directory.

5 (Optional) Specify the attributes you want applied to the file.

You can specify attributes only if Modify attributes on copy is selected.

Attribute	Description			
Archive Needed	Marks the file so it is included if the directory is archived.			
Shareable	Allows more than one user to access the file at the same time. This attribute is usually used only on files with the Read Only attribute.			
Transactional	Allows a file to be tracked and protected by the Transaction Tracking System [™] (TTS [™]) feature. TTS allows interrupted operations to be backed out of the file, restoring it to an uncorrupted state. All database files that need TTS protection should be marked with this attribute.			
	 A file that is flagged Transactional cannot be deleted or renamed. 			
	 A file cannot be flagged Transactional while it is open. 			
	 The Modify right is required to flag a file as Transactional. 			
Rename Inhibit	Prevents the name of the file or folder from being changed.			
	 The Modify right is required to change this attribute. 			
	 A user with the Modify right can change this attribute and then rename the file. 			
	 This attribute is automatically set and removed when the Read Only attribute is set or removed. 			
Don't Suballocate	Previous versions of NetWare [®] worked with a fixed block size, determined at the time of installation. The block size became the smallest unit of storage on the file server's hard disk. Generally, the larger the block size, the better the throughput between file server RAM and the hard disk. However, larger block sizes waste disk space. OES subdivides a disk block into smaller suballocation units of 512 bytes. This ensures that disk space is used efficiently.			
	If you don't want to use the suballocation units on the files you're copying, select Don't Suballocate.			
Execute Only	Permanently prevents files from being copied. Copy Inhibit prevents Macintosh* users from copying a file. This attribute overrides Read and File Scan trustee rights.			
Hidden	Hides the volume, directory, or file from the DOS or OS/2* DIR command and prevents it from being deleted or copied The OES NDIR command shows the file if the user has File Scan rights.			

Attribute	Description		
Purge Immediate	Specifies that this volume, directory, or file is immediately erased from the system if it is deleted. Purged items cannot be recovered.		
	 Normally, files deleted by users are saved by OES so they can be salvaged (recovered). 		
	 To view a list of deleted files in a directory and recover files, right- click the directory name and click Salvage. 		
	 Normally, deleted files are saved until someone purges them or the OES server runs out of disk allocation blocks on the volume. 		
	 When a directory is flagged with the Purge Immediate attribute, any file in that directory is purged when the directory is deleted. Those files and directories can't be recovered with the Salvage option. 		
Don't Migrate	Prevents files from being migrated.		
	Data migration takes files off the server and migrates them onto another media such as a tape or a read/write optical disk. The migrated files are still seen in the directory listing and can be retrieved transparently to the user.		
Read Only	Specifies that no one can write to this directory or file. When the Read Only attribute is set or removed, OES also sets or removes the Delete Inhibit and Rename Inhibit attributes. A user can't write to, erase, or rename a directory or file when Read Only is selected.		
System	Marks the file as a system file.		
Delete Inhibit	Prevents files and folders from being deleted. This attribute overrides the Erase trustee right.		
	 The Modify right is required to change this attribute. 		
	 A user with the Modify and Erase rights can change this attribute and delete the file. 		
	 This attribute is set and removed when the Read-Only attribute is set and removed. 		
Immediate Compress	Specifies that every file in this directory should be compressed as soon as possible after it is closed.		

6 Click OK to copy the files.

2.2 Assigning Rights to Volumes, Files, and Directories

The Trustee Rights utility lets you display and give rights to volumes, files, and directories on a OES server. A trustee is an object (such as a User object, Group object, Organizational Role objects, or container object) that has (or will have) rights to a volume, directory, or file. Trustee assignments allow you to assign ownership, set permissions, and monitor user access.

- **1** Right-click , then click **OES Utilities > Trustee Rights**.
- 2 Select the folder or file you want to set trustee rights for, then click OK.

Client for Open Enterprise Server	×

abhiman	=
admingroup	
ajesh7	-
	Add
Inherited Rights and Filters	Add
Effective Rights Read Erase Modify	Arrest Control
Write Create File Scan	Access Control Supervisor
ОК	Cancel Apply

3 To add a trustee, select the object in the tree diagram, click Add, then set the rights for this user by selecting the boxes under the letters on the right.

For each trustee in the list, there is a set of eight check boxes, one for each right that can be assigned. If a check box is selected, the trustee has that right. To assign or unassign rights, use the check boxes in the dialog box.

The following rights can be set for each trustee:

- **Supervisor:** Grants all rights to the directory or file and any subordinate items. The Supervisor right can't be blocked by an Inherited Rights Filter. Users with this right can grant or deny other users rights to the directory or file.
- **Read:** For a directory, grants the right to open files in the directory and read the contents or run the programs. For a file, grants the right to open and read the file.
- Write: For a directory, grants the right to open and change the contents of files in the directory. For a file, grants the right to open and write to the file.
- Erase: Grants the right to delete the directory or file.
- **Create:** For a directory, grants the right to create new files and directories in the directory. For a file, grants the right to create a file and to salvage a file after it has been deleted.
- **Modify:** Grants the right to change the attributes or name of the directory or file, but does not grant the right to change its contents (changing the contents requires the Write right).
- File Scan: Grants the right to view directory and file names in the file system structure, including the directory structure from that file to the root directory.

• Access Control: Grants the right to add and remove trustees for directories and files and modify their trustee assignments and Inherited Rights Filters.

This right does not allow to add or remove the Supervisor right. Also, it does not allow to remove the trustee with the Supervisor right.

- 4 To remove a trustee, select one or more trustees in the Trustees list, then click Remove.
- 5 To view a list of rights and filters inherited by this volume, click Inherited Rights and Filters.
- 6 To apply the same trustee assignments to a group of selected files, click Combine Multiple Trustees.

This check box is available only if you're viewing the right for multiple files or directories. At least one of the files or directories must have at least one trustee assignment. The trustees and rights shown are the combined trustees and rights for all of the files. If you select **Combine Multiple Trustees**, the trustee assignments that are chosen apply to all of the selected files after you click **OK** or **Apply**.

For example, Kim is a trustee of file_a and file_b. Kim has Read, File Scan, and Access Control rights for file_a and Read and File Scan rights for file_b. If you select file_a and file_b and view their properties, Kim is shown as a trustee with Read, File Scan, and Access Control rights.

If you select **Combine multiple Trustees** and then click **OK**, Kim is given the Access Control right for file_b. Therefore, Kim now has Read, File Scan, and Access Control rights for both file_a and file_b.

7 Click Apply, then click OK when you are finished modifying trustee rights.

2.2.1 Limiting Access to My Files and Directories

- 1 Double-click the Network folder.
- 2 Navigate to the file or directory.
- 3 Right-click the file or directory, then click Properties.
- **4** To change the access attributes of the file or directory, click **General**, select the attributes you want, then click **Close**.

2.3 Setting Inherited Rights and Filters

The Inherited Rights and Filters utility lets you view and set information about trustees and rights. Rights assignments on eDirectory[™] containers can be inheritable or non-inheritable, but all rights assignments on directories are inheritable. You can block such inheritance on individual subordinate items so that the rights aren't effective on those items, no matter who the trustee is. One exception is that the Supervisor right can't be blocked.

- 1 Right-click **I**, then click OES Utilities > Inherited Rights and Filters.
- 2 Select the folder or file you want to view or set inherited rights and filters for, then click OK.

Inherited Rights and Filters			? ×

		Cancel	

The main part of this dialog box is the list of trustees inherited from the selected item and its parent folders.

3 To assign or unassign rights, use the check boxes to the right of a trustee.

For each trustee in the list, there is a set of eight check boxes, one for each right that can be inherited. If a check box is selected, the trustee has that right.

- **Read:** For a directory, grants the right to open files in the directory and read the contents or run the programs. For a file, grants the right to open and read the file.
- Write: For a directory, grants the right to open and change the contents of files in the directory. For a file, grants the right to open and write to the file.
- Erase: Grants the right to delete the directory or file.
- **Create:** For a directory, grants the right to create new files and directories in the directory. For a file, grants the right to create a file and to salvage a file after it has been deleted.
- Modify: Grants the right to change the attributes or name of the directory or file, but does
 not grant the right to change its contents (changing the contents requires the Write right).
- File Scan: Grants the right to view directory and file names in the file system structure, including the directory structure from that file to the root directory.
- Access Control: Grants the right to add and remove trustees for directories and files and modify their trustee assignments and Inherited Rights Filters.

This right does not allow to add or remove the Supervisor right. Also, it does not allow to remove the trustee with the Supervisor right.

- **Supervisor:** Grants all rights to the directory or file and any subordinate items. The Supervisor right can't be blocked by an Inherited Rights Filter. Users with this right can grant or deny other users rights to the directory or file.
- 4 To see a list of trustees for subfolders of the currently selected folder, click View Trustees Below Directory.

A list of all the users and their rights to each subfolder appears. You can modify or remove rights from this list.

5 To view a trustee's current effective rights (taking into account the Inheritance filter), right-click a trustee name, then click **Current Effective Rights**.

Users can receive rights in a number of ways, such as explicit trustee assignments, inheritance, and security equivalence. Rights can also be limited by Inherited Rights Filters and changed or revoked by lower trustee assignments. The net result of all these actions (the rights a user can employ) is called *effective rights*.

- **6** To view a trustee's properties (such as if they have the rights to modify inherited rights at this level), right-click a trustee name, then click **Properties**.
- 7 Click Apply, then click OK when you are finished modifying inherited rights and filters.

2.4 Viewing and Setting Object Properties

The Object Properties utility lets you view the property pages for a selected object. The property pages let you see information and statistics about that object. If you have sufficient rights, you can set attributes for that object.

- Section 2.4.1, "Viewing and Setting File and Folder Properties," on page 26
- Section 2.4.2, "Viewing Volume Properties," on page 28

2.4.1 Viewing and Setting File and Folder Properties

- **1** Right-click , then click **OES Utilities > Object Properties**.
- 2 Select the Network file or folder whose properties you want to see, then click OK.
- **3** On the **OES Info** page, you can view the owner of the folder, the name spaces enabled on the folder, the amount of disk space available to you, the date the folder was created, updated, and archived, and any attributes set on the folder.

If you have Access Control rights and need to make changes to the OES rights associated with this object, see Managing File Security in the *Client for Open Enterprise Administration Guide* for specific steps on setting OES file rights.

If you do not have Access Control rights, your effective rights to the file appear in the Effective Rights box. You cannot change these rights.

6 Click Apply, then click OK when you are finished viewing or modifying the object's properties.

2.4.2 Viewing Volume Properties

- 1 In Windows Explorer, navigate to the OES volume whose properties you want to view.
- 2 Right-click the Volume, then click Properties.
- **3** To view information about the total amount of used and available disk space on the volume and information about the number of used and available directory entries on the volume, click the **OES Volume Statistics** tab.

The information you can view includes the following:

- Volume Name: The name of the volume. The volume name corresponds to the name of the disk (or label) for local disks, such as diskettes or workstation hard disks.
- Server: The server where the volume is located.
- **Object Name:** The volume's eDirectory object name.
- Name Spaces: The name spaces enabled on the volume.
- Volume Number: The number of the volume. The volume number can be useful in diagnosing errors.
- Block Size: The block size of the volume (in kilobytes).
- User Restriction Graph: The amount of disk space you are using and the amount of remaining disk space that you can use. Space Restriction is the disk space available to you.
- 5 Click OK when you are finished viewing the object's properties.

2.5 Salvaging and Purging Deleted Files

The Salvage utility lets you recover deleted files and directories from OES file systems. The Purge utility lets you purge deleted files and directories from OES file systems. Files that have been purged cannot be recovered.

2.5.1 Salvaging Deleted Files

IMPORTANT: You cannot salvage files or directories from an OES for Linux Reiser volume.

- 1 Right-click **D**, then click **OES Utilities > Salvage**.
- 2 Select the folder where the files you want to recover are located, then click OK.
- **3** Select the files you want to recover.

∢	III				•

4 Click Salvage File.

To salvage all deleted files in the folder, click Salvage All.

5 Click Close.

2.5.2 Purging Deleted Files

Deleted files are purged from a volume when one of the following events occurs:

- The Purge Delay setting times out. Deleted files are purged automatically.
- If a volume starts to fill up, the server starts purging files; the oldest files that have been deleted are automatically purged.
- If you do not want a file to be restored after deletion, you can enable the Immediate Purge of Deleted Files parameter. The file is deleted and purged immediately.
- You manually purge the deleted files.

WARNING: The Purge utility permanently removes deleted files from the selected directory. Purged files cannot be recovered with the Salvage utility.

IMPORTANT: You cannot purge deleted files or directories from an OES for Linux Reiser volume.

- **1** Right-click **I**, then click **OES Utilities > Purge**.
- 2 Select the folder where the files you want to purge are located, then click OK.
- **3** Select the files you want to purge

(5110	- feeberrieer]	

- **4** Click the appropriate purge option.
 - Click Purge File to purge only the currently selected item(s) from the current directory level for which the Purge Files dialog was invoked.
 - Click Purge All to purge all the deleted file items and deleted directory items in the current directory level for which the Purge Files dialog was invoked.
 - Click Purge Subdirectories to purge all the deleted file items and deleted directory items in the current directory level, and then recurse into each subdirectory and purge all the deleted file items and deleted directory items in them too, starting at the current directory level for which the Purge Files dialog was invoked.
- 5 Click Close.

2.5.3 Salvage and Purge Errors

Beginning with Client for Open Enterprise Server 2 SP4 (IR7), the failure of salvage or purge operations displays appropriate error messages.

Complete failure of salvage or purge operation: When all the files selected for salvage or purge fails, an error message with the error code is displayed.

Partial failure of salvage or purge operation: When some of the files selected for salvage or purge fails, the details of the files that failed and their respective error codes are displayed in a dialog box.

alvage Errors			>
			Status: 5 items failed
File Name	Error Code	Error Message	Original File
results9.dat	0x0000064	Unable to salvage file.	results9.da
results8.dat	0x0000065	Unable to salvage file.	results8.da
results7.dat	0x0000066	Unable to salvage file.	results7.da
results6.dat	0x0000067	Unable to salvage file.	results6.da
results5.dat	0x0000068	Unable to salvage file.	results5.da
<			>
			Close

Open Salvage or Purge window: If you try to open a new Salvage or Purge window when one Salvage or Purge window is already open, an error message is displayed.

2.6 Sending a Broadcast Message

To send a broadcast message

- 1 From the Client Tray Application menu select OES Utilities > Send Message > To Users.
- 2 Double-click the server to see a list of users and groups connected to it.
- **3** Type the message.
- 4 Select the users and/or groups to send the message to.
- 5 Click Send.

The Send Message Results dialog appears, showing the users and groups that the message was sent to."

Configuring Your User Account

You can view or configure various aspects of your eDirectory[™] user account by selecting the User Administration for option from the □ menu. The options on the submenu let you do the following:

- Section 3.1, "Viewing Personal Information," on page 35
- Section 3.2, "Viewing Work Information," on page 36
- Section 3.3, "Displaying Mailing Information," on page 36
- Section 3.4, "Editing Your Login Script," on page 37
- Section 3.5, "Configuring Login Account Information," on page 38
- Section 3.6, "Changing Your Network Password," on page 39
- Section 3.7, "Viewing Group Memberships," on page 44
- Section 3.8, "Challenge/Response Administration," on page 44
- Section 3.9, "Managing Your Login Profiles," on page 45

3.1 Viewing Personal Information

This dialog box displays information about your name.

1 Right-click **I**, then click User Administration for > Personal Information.

- 2 View your login and account information.
- **3** Click **OK** to close the dialog box.

3.6 Changing Your Network Password

You can use either of the following ways to change you Network password:

- Section 3.6.1, "Using the Client Tray Application Menu to Change Your Network Password," on page 39
- Section 3.6.2, "Using Ctrl+Alt+Delete to Change Your Network Password," on page 41
- Section 3.6.3, "Using the Client Tray Application Menu to Change Password When Advanced Authentication is Enabled," on page 42

3.6.1 Using the Client Tray Application Menu to Change Your Network Password

Use the User Password Administration dialog box to view information about your password restrictions and to change your eDirectory password.

1 Right-click **D**, then click User Administration for >Password Administration.

- 2 Click Change Password.
- **3** Select the users whose password you want to change.

Change Password		
You are changing par listed below on the se		Enter: Full <u>U</u> ser Name:
Resource	User Name user123	Old Password:
	user123 user123	New Password:
		Confirm New Password:
		Password Hint
Show All	Resources	Password Policy OK Cancel

For example, you can change your Network password and your Windows 7 password, or you can change only your Network password.

- 4 Type your current password in the Old password field.
- 5 Type your new password in the New password field.
- 6 Retype the new password in the Confirm field.
- 7 Click OK.

You will receive a message telling you that the passwords for all selected resources were successfully changed.

8 Click OK to close the message, then click OK to close the User Password Administration dialog box.

3.6.2 Using Ctrl+Alt+Delete to Change Your Network Password

If you are logged into eDirectory, you can use the following steps to change your Network password. If you are not logged into eDirectory, pressing Ctrl+Alt+Delete then clicking **Change a password** will let you change your local user password only.

- 1 Press Ctrl+Alt+Delete, then click Change a password.
- 2 Click the logon tile.
- **3** Type your current Network password in the **Old password** field, type your new password in the **New password** field, then retype the new password in the **Confirm new password** field.

	Change your network password	
	eDir1 Old password New password Confirm new password	**
	Cancel	
œ	🥵 Windows 7 Enterprise	

4 Press Enter.

After the old password is verified, and if the new passwords you specified match, the Network Change Password dialog box opens.

5 Select which resources you want the password change to go to.

	passwords for the users e selected resources:	Enter: Full User Name
Resource	User Name	Qid Password:
user123-PC	user123	
TOPAZ	user123	New Password
		•••••

		Password Hint
C Chan	Al Resources	Pastword Policy

For example, you can change your Network password and your Windows 7 password, or you can change only your Network password.

6 Click OK.

You will receive a message telling you that your password has been changed.

7 Click OK to close the message.

3.6.3 Using the Client Tray Application Menu to Change Password When Advanced Authentication is Enabled

- **1** Right-click **D**, then click User Administration for >Password Administration.
- 2 Click Change Password.
- 3 Enter the Advanced Authentication user name and click Verify.

Advanced Au	thentication Requir	ed		×
To initiate "Username	a password change, e " or "REPOSITORY\Us	enter you <mark>r Advancec</mark> sername [®] for verifica	l Authentication tion.	
(HEAKWARD)	Verify	Cancel) 	

4 Perform the Advanced Authentication logon based on the method configured.

5 Select the resources for which you want to change the password.

Resource	User Name	
🔜 iajesh-PC	iajesh	Old Password:
OES2018-119	9-96 eDirUser 1	New Password:
		Confirm New Password:
		Password Hint

- 6 Type your current password in the Old password field.
- 7 Type your new password in the New password field.
- 8 Retype the new password in the Confirm field.
- 9 Click OK.

You will receive a message telling you that the passwords for all selected resources were successfully changed.

10 Click **OK** to close the message, then click **OK** to close the User Password Administration dialog box.

3.7 Viewing Group Memberships

This dialog box displays a list of the groups you belong to. A group is a collection of users who have the same rights to the same network resources.

1 Right-click **1**, then click User Administration for > Group Memberships.

Group Membership
Currently authenticated user .CN=admin.O=novell
The user belongs to these groups:
Sadmingroup.novell
Close

- 2 View the list of the groups you belong to.
- **3** Click **OK** to close the dialog box.

3.8 Challenge/Response Administration

When you log in, the Client for Open Enterprise checks to see if your system administrator has enabled the Forgotten Password feature and if you have entered responses to the challenge questions. If you have not entered responses, you are notified and a dialog box opens so that you can enter your responses. If the password policy uses a password hint or a password reminder and this option was not set, the Client prompts you to enter this information.

If your system administrator has not enabled the Forgotten Password feature, you receive a message telling you that you cannot administer the challenge/response feature because Forgotten Password has not been enabled

- **1** Right-click , then click User Administration for > Challenge/Response Administration.
- **2** Depending on how your system administrator configured the challenge sets, enter your information in the dialog boxes presented.

For example, if your administrator specifies four questions in the challenge set, enter your information in four different dialog boxes.

1/3	ADMINISTRATOR-DEFINED QUESTION	Cancel
Challeng	ge Question:	
Vhat is	your User ID?	
Vhat is	your User ID?	
	your User ID? ge Response:	

- **3** Follow the on-screen instructions to complete the challenge/response configuration.
- 4 Click OK when you receive a message telling you that your challenge/response data has been updated.

3.9 Managing Your Login Profiles

You can use login profiles to save login information, such as your username, server, tree, context, and login script. When you select a profile during login, the profile automatically sets up the login information you (or your system administrator) specified so that you don't have to enter this information.

Login profiles are especially useful if you log in from multiple places. You can create separate profiles for the office, home, laptop, or any other workstation you use. This simplifies the login process so that you don't have to remember your login information for each workstation.

The Client also allows different users on the same machine to have their own login profiles.

You can add, modify, or delete your own login profiles. Your system administrator can also create login profiles for you, or define a set of system login profile templates that contain the information most commonly needed for your environment. You can modify or delete your own login profiles as needed, but you can only view login profiles created by your system administrator.

- Section 3.9.1, "Creating a Login Profile," on page 45
- Section 3.9.2, "Viewing or Editing a Login Profile," on page 47
- Section 3.9.3, "Removing a Login Profile," on page 47
- Section 3.9.4, "Enabling the Use of DHCP In a Personal Login Profile," on page 47

3.9.1 Creating a Login Profile

1 Right-click **I**, then click User Administration for > Login Profile Administration.

Login Profile Administration
Username User 123
User Login Profile
DHCP
Remove Properties
Close

- 2 To create a login profile, type the name of the profile you want to add in the User Login Profile text box, then click Add.
- **3** In the OES Login dialog box, specify the login information you want for this profile, such as the user's name, server, and context.

Client for	Open Enterprise Server Login	x
[]	Micro Focus [®] Client for Open Enterprise Server [®] for Windows	
Save prof	le after successful login	
Credentials	eDirectory Script Windows NMAS 802.1X	
Tree:	▼ Trees	
Context:	▼ Contexts	
Server:	▼ Servers	
	ОК	Cancel

4 Click OK to close the OES Login dialog box, then click Close.

When you log in using the OES Login dialog box, you can use the Login Profile drop-down list to select the login profile you created.

Client for Open Enterprise Server Login				
	Micro Focus [®] Client for Open Enterprise Server [®] for Windows			
Login Profile:	office 🔹			
Username: Password:	edir 1			
Did you forget yo	pur password?			
	OK Cancel	Advanced >>		

3.9.2 Viewing or Editing a Login Profile

- **1** Right-click , then click User Administration for > Login Profile Administration.
- 2 Select the name of the login profile you want to view or edit.
- 3 Click Properties.
- 4 In the OES Login dialog box, view or modify the login information you want for this profile, such as the username, server, and context.
- 5 Click OK to close the OES Login dialog box, then click Close.

3.9.3 Removing a Login Profile

- **1** Right-click **D**, then click User Administration for > Login Profile Administration.
- 2 Select the name of the login profile you want to remove.
- 3 Click Remove.
- 4 Click OK to close the Client Properties dialog box, then click Close.

3.9.4 Enabling the Use of DHCP In a Personal Login Profile

If a DHCP server is set up on your network, the DHCP server can inform the Client of network-specific configuration information. To enable the use of DHCP in the Client for Open Enterprise, create a DHCP entry in a login profile. You can do this by creating a new profile or by editing an existing profile.

- **1** Right-click **1**, then click User Administration for > Login Profile Administration.
- 2 Type the name of the profile you want to add (for example, Corporate) in the User Login Profile text box, then click Add.
- **3** In the fields you want to be filled by DHCP, select **<DHCP>** from the drop-down menu.

Client for	Open Enter	rprise Se	erver Logir)			×
				Enterp	ris	se Server [™]	
V Save profi	le after succe	essful logi	in				
Credentials	eDirectory	Script	Windows	NMAS	802.	1X	
Tree:	<dhcp></dhcp>				•	Trees	
Context:	<dhcp></dhcp>				•	Contexts	
Server:	<dhcp></dhcp>				•	Servers	
RSA THE							
						ОК	Cancel

4 Click OK, then click Close.

The next time you open the OES Login dialog box, the DHCP profile you created is available as an option on the Login Profile drop-down menu.

Select the DHCP profile from the Login Profile drop-down menu to automatically populate the fields that were given the <DHCP> option in Step 3 with whatever the DHCP server sends.

Client for	Open Enterprise Server Login	X
	Micro Focus [®] Client for Open Enterprise Server [®] for Windows	
Login Profile:	Corporate	
<u>U</u> sername:	edir 1	
Password:		
Did you forge	t your password? Script NMAS	
<u>T</u> ree:	N18097TREE Trees	
<u>C</u> ontext:	Sales Contexts	
Server:	YXW-3498 Servers	
RSA THE		
	OK Cancel	Advanced <<

NOTE: When using the login profile to perform a OES login, you can overwrite the values displayed by DHCP, but the changes are in effect only for that specific login. If **<DHCP>** is chosen as an option in a login profile for Tree, Context, or Server, you cannot remove it by simply editing the field when logging in or by saving the profile on successful login. Any values entered

in these fields during login are not saved when **<DHCP>** is enabled for that field. If you want to permanently change the values in that field, you must edit the login profile using either the System Profile Manager (System Login Profiles tab on the Client Properties dialog box) or the User Profile Manager (Login Profile Administration option on the Client Tray Application menu).

A Documentation Updates

The Client for Open Enterprise Server User Guide has been updated as shown below.

May 2016

Section	Change				
All	Novell Client is rebranded to Client for Open Enterprise Server. Updated the guide content to reflect the branding changes.				
September 30, 2015					
Section	Change				
All	Updated guide content to reflect the added support for Windows 10 in the SP4 IR1 release.				
January 30, 2013					
Section	Change				
All	Updated guide content to reflect the added support for Windows 8 and Windows Server 2012 in the SP3 release.
